

Bug Report Analysis Guru99

Project Name: Guru99_Banking_ Automation

Bug Report 1:

Summary:

The application restricts deposit transactions to integer values only. Decimal amounts (e.g., 100.50) are not accepted,

Description :

When performing a deposit transaction, the system only accepts whole numbers in the amount field. If the user enters a decimal value, the transaction fails or the input is rejected. This limitation reduces flexibility and does not reflect real-world banking scenarios where decimal values (paise/cents) are common.

Steps to Reproduce:

1. Login with valid Manager credentials.
2. Navigate to **Deposit Page**.
3. Enter valid account number (e.g., 183450).
4. Enter deposit amount with decimal value (e.g., 100.50).
5. Click on **Submit/Deposit** button.

Expected Result:

- System should accept decimal values in deposit amount.
- Balance should increase by the exact decimal value entered.

Actual Result:

- System rejects decimal values.
- Transaction fails or only integer part is processed.

Severity/Priority:

- **Severity:** Medium
- **Priority:** Medium

Bug Report 2:

Summary:

The application accepts an invalid email format (e.g., 123@g.com) during customer creation without displaying any validation error.

Description

When adding a new customer, the system does not validate the email field properly. Even if the email entered is incomplete or invalid, the application proceeds with customer registration. This compromises data quality and may prevent future communication with the customer.

Steps to Reproduce:

1. Login with valid Manager credentials.
2. Navigate to **New Customer Entry Page**.
3. Fill all mandatory fields with valid data.
4. Enter an invalid email format (e.g., 123@g.com).
5. Click on **Submit** button.

Expected Result:

- System should reject invalid email format.
- Error message should be displayed: *"Email-ID is not valid"*.
- **Actual Result:**
 - Customer creation proceeds successfully.
 - Invalid email accepted without validation error.
- **Severity/Priority:**
 - **Severity:** Medium (data integrity issue).
 - **Priority:** High (email validation is critical for customer communication)

Screenshot Bug

The screenshot shows a web browser window with the URL <https://demo.guru99.com/V4/manager/addcustomerpage.php>. The page is titled "GURU99 Demo Site" and features a navigation bar with various project categories. On the left, there is a sidebar menu with options like "Delete Customer", "New Account", "Edit Account", "Delete Account", "Deposit", "Withdrawal", "Fund Transfer", "Change Password", "Balance Enquiry", "Mini Statement", and "Customised Statement". The main content area displays a form for adding a new customer. The form fields are as follows:

Field	Value
Customer Name	Bharath kumar
Gender	☒ male ☐ female
Date of Birth	01-07-2002
Address	Delhi
City	Greater Noida
State	Delhi
PIN	824113
Mobile Number	7295015459
E-mail	123@g.com

Bug Report 3:

Summary:

Deposit page site crashes with HTTP 500 error

Description :

When submitting a deposit transaction, the server encounters an internal error and cannot handle the request. The page crashes, preventing the user from completing the deposit. This is a critical defect because it blocks core functionality.

Steps to Reproduce:

1. Login with valid Manager credentials.
2. Navigate to **Deposit Page**.
3. Enter valid account number and amount.
4. Click on **Submit/Deposit** button.

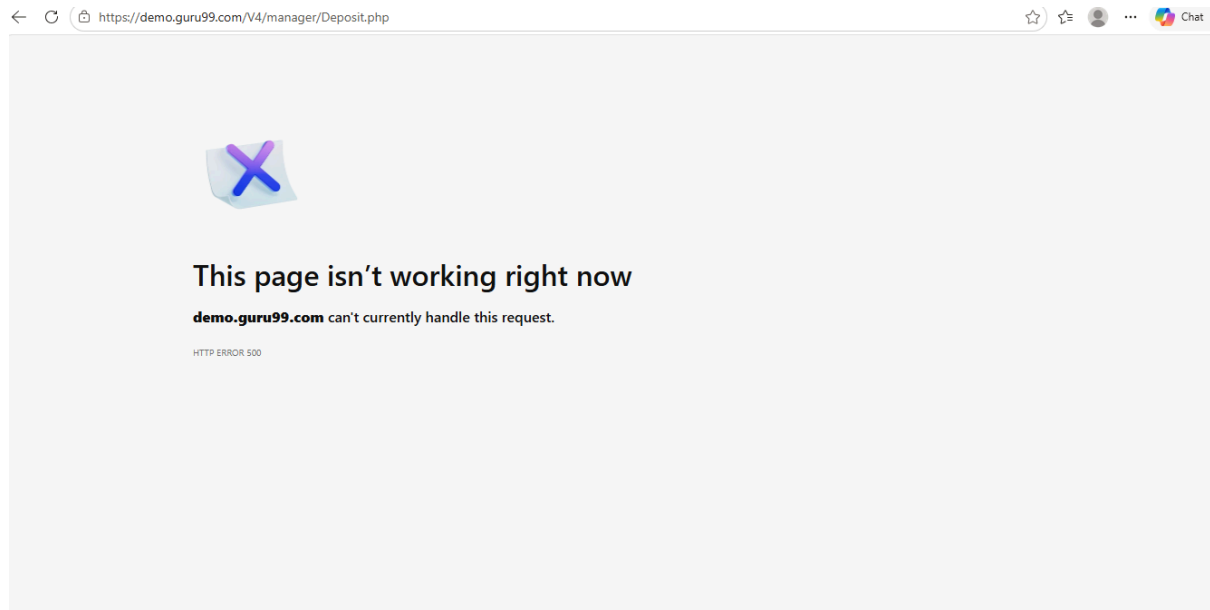

Expected Result:

- System should process deposit transaction successfully.
- Confirmation message should be displayed.

Actual Result (from screenshot):

- Page crashes with **HTTP ERROR 500**.
- Transaction not processed.
- **Severity/Priority:**
 - **Severity:** Critical (core functionality blocked).
 - **Priority:** Immediate fix required.

Bug Report 4:

Summary:

The application allows customer creation even when the Date of Birth entered is greater than the current date (e.g., 01-07-2030). No validation error is displayed, and the record is saved with invalid data.

Description :

When adding a new customer, the system does not validate the Date of Birth field properly. If the user enters a future date, the application accepts it and proceeds with customer registration. This results in logically incorrect data being stored, which can affect reporting, compliance, and customer verification processes.

Steps to Reproduce:

1. Login with valid Manager credentials.
2. Navigate to **New Customer Entry Page**.
3. Fill all mandatory fields with valid data.
4. Enter a future Date of Birth (e.g., 01-07-2030).
5. Click on **Submit** button.

Expected Result:

- System should reject future Date of Birth.
- Error message should be displayed: *"Date of Birth cannot be in the future"*.

Actual Result:

- Customer creation proceeds successfully.
- Future DOB accepted without validation error.

Severity/Priority:

- **Severity:** High (logical data integrity issue).
- **Priority:** High (DOB validation is critical for customer identity verification).

Bug Report 5:

Summary:

The system accepted the negative value (-500) in the deposit amount field

Description :

When performing a deposit transaction, the system does not validate against negative values. If the user enters a negative amount, the application accepts it and proceeds. This is a serious flaw because deposits should only allow positive values.

Steps to Reproduce:

1. Login with valid Manager credentials.
2. Navigate to **Deposit Page**.
3. Enter valid account number (e.g., 183450).
4. Enter deposit amount as a negative value (e.g., -500).
5. Click on **Submit/Deposit** button.

Expected Result:

- System should reject negative values.
- Error message should be displayed: *"Deposit amount must be positive"*.
- **Actual Result (from screenshot):**
 - System accepts negative values.
 - Transaction proceeds without validation error.
- **Severity/Priority:**
 - **Severity:** High
 - **Priority:** Critical

Bug Report 6:

Summary: Someime show“Please fill all fields” even when all fields are filled

Description 👍

When submitting a deposit transaction with all required fields filled (Account No, Amount, Description), the system still displays a validation error message. This prevents the transaction from being processed and confuses the user.

Steps to Reproduce:

1. Login with valid Manager credentials.
2. Navigate to **Deposit Page**.
3. Enter valid Account No (e.g., 183390).
4. Enter valid Amount (e.g., 1000).
5. Enter Description (e.g., sending).
6. Click on **Submit** button.

Expected Result:

- System should accept the input and process deposit successfully.
- Confirmation message should be displayed.
- **Actual Result**
 - System shows error popup: “Please fill all fields”.
 - Transaction blocked even though all fields were filled.
- **Severity/Priority:**
 - **Severity:** High (blocks deposit functionality).
 - **Priority:** Critical (must be fixed immediately)
